Federal Aviation **Administration** 

Office of the Administrator

800 Independence Ave., S.W. Washington, D.C 20591

APR 13 1984

The Honorable George Bush President of the Senate Washington, D.C. 20510

Dear Mr. President:

I am pleased to forward the Federal Aviation Administration's Semiannual Report to Congress on the Effectiveness of the Civil Aviation Security Program. It covers the period July 1 through December 31, 1983, and is submitted in accordance with section 315(a) of the Federal Aviation Act.

Extraordinary security measures were instituted during mid-1983 in an effort to curtail the rapidly increasing frequency of aircraft piracy incidents which occurred during the May-September 1983 period. In this 5-month period, there were 14 U.S. aircraft hijacked. Eleven of these hijackings ended in Cuba. During the final 3 months of 1983, there were two U.S. aircraft hijacked. This significant reduction in hijackings is believed to be largely the result of the implementation of the extraordinary security measures. Our Government/industry response to this emergency situation demonstrates the strong determination of all concerned to bring these criminal acts to a halt.

A copy of this report has been provided to the Speaker of the House of Representatives.

Sincerely,

Donald D. Engen

Administrator

Enclosure

## I. EXECUTIVE HIGHLIGHTS

## JULY-DECEMBER 1983

- 1. OVER 395.2 MILLION PERSONS WERE PROCESSED THROUGH U.S. PASSENGER CHECKPOINTS. THERE WERE 1,421 FIREARMS DETECTED WITH 649 RELATED ARRESTS.
- 2. WORLDWIDE, 16 HLJACKINGS OCCURRED (10 SUCCESSFUL) AGAINST SCHEDULED AIR CARRIERS. ELEVEN WERE AGAINST U.S. AIRLINES (8 SUCCESSFUL).
- 3. OF THE 5 FOREIGN AIR CARRIER HIJACKINGS, 3 OCCURRED ON DOMESTIC FLIGHTS.
- 4. THERE WAS 1 U.S. GENERAL AVIATION AIRCRAFT HIJACKED DURING THE PERIOD.
- 5. ALLEGED SECURITY VIOLATIONS BY AIR CARRIERS, AIRPORTS, AND INDIVIDUALS TOTALED 1,751.
- 6. OF THE 1,751 ALLEGED SECURITY VIOLATIONS, 219 RESULTED IN CIVIL PENALTIES TOTALING \$90,906.

## II. INTRODUCTION

This is the 19th Semiannual Report to Congress on the Effectiveness of the Civil Aviation Security Program. It covers the period July 1 - December 31, 1983, and is submitted in accordance with section 315(a) of the Federal Aviation Act. This report presents a concise picture of the national situation with regard to the effectiveness of the procedures utilized to screen airline passengers and their carryon items prior to their being allowed to board scheduled and public charter flights.

## III. AIRCRAFT HIJACKINGS

To differentiate between air carrier and general aviation hijackings, all hijackings of certificate holder aircraft have been considered air carrier hijackings. A certificate holder is defined in Federal Aviation Regulations (FAR) 108 as a person holding a Federal Aviation Administration (FAA) operating certificate when that person engages in scheduled passenger or public charter passenger operations or both.

SECOND SECOND SECOND SECOND SECOND SECOND SECOND SECOND

In somewhat of a resurgence of the large number of hijackings which were perpetrated by Cuban refugees in the last half of 1980, 11 air carrier hijackings occurred during the last 6 months of 1983. Eight of these hijackings were successful and 7 of the 8 ended in Cuba. Six of the 11 hijackings were perpetrated by Cubans believed to have arrived in the United States by boat as refugees in 1980. These 11 hijackings which occurred in this reporting period are more than any previous half-year period since 1980. The 18 air carrier hijackings in all of 1983 represent more than the combined number of air carrier hijackings for all of 1981 and 1982. To meet and contain the growing frequency of air carrier hijacking incidents, extraordinary security measures were instituted in selected areas. Additionally, considerable emphasis was placed upon extra vigilance at passenger screening checkpoints and efficiency in all security measures throughout the system.

During this same 6-month period, 5 foreign air carrier aircraft were hijacked; 2 of these hijackings were successful and in three cases the hijackings occurred aboard aircraft which were on scheduled domestic flights within the country of registry.

(See Exhibits 1 and 2)

One U.S. general aviation hijacking occurred during the reporting period. This is the fourth year in a row in which only one general aviation aircraft has been hijacked. The overall record of U.S. general aviation hijackings has been included in this report.

(See Exhibit 3)

In addition to the analysis and recording of actual hijackings, the FAA attempts to identify and record those incidents in which it appeared that individuals involved intended to hijack an aircraft but were prevented from doing so by security measures in effect. During this reporting period, there were 1,421 firearms detected at security screening checkpoints under suspicious circumstances. It is believed that in some of these instances the persons carrying the firearms may have intended to hijack an aircraft. While the number of incidents in which an aircraft hijacking or related criminal act against civil aviation was prevented cannot be determined with certainty, in five specific incidents during the last half of 1983, the circumstances tend to support that likelihood. This raises the estimated total number of hijackings or related crimes against civil aviation believed prevented since 1973 to 111.

the relation between the control of the control of the relation of the control of

(See Exhibits 4 and 7)

## IV. RASIC POLICIES - SCOPE AND EFFECTIVENESS

The overall success of the U.S. Civil Aviation Security Program can be largely attributed to the cooperative attitude and mutually supportive efforts of the airlines, airports, local communities, the Federal Government, and the passengers. Basic policies quiding the program recognize airline responsibilities for the safety of passengers, baggage, cargo, and aircraft. Airport operators are responsible for maintaining a secure ground environment and for providing necessary law enforcement support for airline and airport security measures. Finally, with the inclusion of security costs in airline ticket prices, the passengers, who are the principal beneficiaries of the security program, pay the costs via the domestic airline fares. Since the initiation of strengthened security measures in 1973, over 5 billion persons have been screened and over 6.5 billion carryon items have been inspected. This screening and inspection activity has resulted in the detection of almost 29.000 firearms which resulted in almost 12,000 arrests.

(See Exhibits 5 and 6)

## V. PASSENGER SCREENING

The airline screening program, which encompasses the inspection of passengers and their carryon items, was fully implemented in January 1973. During the approximate 11 years these screening systems have been in operation, there has been an overall dramatic decrease in the annual average number of hijackings of U.S. air carrier aircraft. Since the initiation of these procedures, there have been 91 air carrier aircraft hijackings. This amounts to an average of about 8 per year and is about 30 percent of the average of 27 per year experienced in the 5 years immediately preceding the beginning of the program. Of the 11 hijackings between July 1 - December 31, 1983, 7 ended in Cuba, making a total of 11 successful hijackings to Cuba for the entire year of 1983. This total is near to the 13 that occurred in 1980, the year in which a great surge in the number of successful hijackings to Cuba occurred.

The objective of passenger screening activities centers particularly on the detection of firearms and explosives or incendiary devices. These items are considered to present the greatest threat to civil aviation security. The FAA's analysis of screening checkpoint activity includes the recording and study of the number of firearms and explosive or incendiary devices detected and false threats received, as well as related information received concerning arrests of individuals involved. Screening activities are further analyzed within airport categories according to the number of persons screened per year as follows: Category I - 2 million or more, Category II - 500 thousand to 2 million, and Category III and IV - under 500 thousand. Passenger screening is conducted at Catagory IV airports only when deplanement into a sterile area at another airport is desired. Results of U.S. screening activities for the last six months of 1983 are detailed below.

SSI TOMAN LEAGUE SCHOOL PROBLEM INTO THE PROBLEM STATE OF THE PROBLEM ST

During the last half of 1983, over 395 million persons were processed through screening checkpoints at 361 airports. A total of 1,421 firearms were detected; 1,361 (96 percent) through X-ray inspection, 48 (3 percent) by use of weapon detection devices, and 12 (1 percent) by physical search. The total firearms detected is 20 percent higher than the average of 1,186 firearms detected during the preceding eight reporting periods and 4 percent higher than the 1,363 firearms detected during the first half of 1983. There were no explosive/incendiary devices detected during this reporting period.

There were 649 persons arrested at screening points for the carriage of firearms. This represents an increase of 54 (9 percent) over the average of 595 arrests for the preceding eight reporting periods and an increase of 16 (3 percent) from the 633 which occurred during the first 6 months of 1983. The 649 arrests were made at screening points at 85 airports throughout the United States. Of the 649 arrests, 541 (83 percent) occurred at 43 Category I airports (e.g., Los Angeles, California, and Chicago, Illinois); 84 (13 percent) occurred at 28 Category II airports (e.g., Raleigh-Durham, North Carolina, and Colorado Springs, Colorado); and the remaining 24 (4 percent) occurred at 14 Categories III and IV airports (e.g., Baton Rouge, Louisiana, and Roanoke, Virginia).

Historically, well over 50 percent of the persons arrested for attempting to carry firearms through passenger screening systems have been fined, placed in confinement or been subjected to other disciplinary action. In addition to criminal prosecutive actions by Federal and local jurisdictions, the FAA may take civil action against individuals who without proper authorization attempt to carry a firearm or explosive/incendiary device through screening checkpoints. During this reporting period, of the 1,751 investigations completed, 1,491 investigations were of individuals. These resulted in the collection of \$62,895 in civil penalties. For the entire 1983 period, 2,951 investigations of individuals were completed and \$84,190 in civil penalties was collected. This number of individual investigations completed and the amount of civil penalties collected are greater than in any previous year.

The equipment primarily used to conduct screening operations consists of walk-through weapon detectors for the screening of passengers and, at high volume screening checkpoints, X-ray inspection systems for carryon articles. At most stations, hand-held metal detecting devices are used as backup support for the walk-through weapon detection devices. The FAA, in conjunction with the airline industry, has ongoing research and development projects geared toward producing new screening equipment which will improve detection capabilities and minimize passenger inconvenience.

(See Exhibits 7 and 8)

## VI. COMPLIANCE AND ENFORCEMENT

The FAA is responsible for ensuring compliance by airlines, airports, and individuals with the various security requirements levied through pertinent Federal Aviation Regulations. The basic purpose of these requirements is to assure safety and security for airline passengers and crewmembers. Alleged or apparent violations of regulatory requirements are investigated and appropriate administrative or legal actions taken.

A high degree of cooperation between industry personnel and the persons responsible for enforcement of the regulations is necessary to assure success in achieving compliance by all concerned. Airlines and airport operators generally take prompt corrective action on their own when a potential problem is recognized, thus reducing the need for more extensive enforcement action.

Where an investigation of an alleged violation of the regulations indicates lack of compliance, administrative or legal action may be necessary. These actions take the form of warnings, letters of correction, or assessment of civil penalties. During the second half of 1983, 1,751 investigations of alleged security violations by air carriers, foreign air carriers, airports, and individuals were completed. In 219 of the cases, civil penalties totaling \$90,906 were collected, and in 1,404 cases, administrative corrective action was taken. In the remaining cases, the alleged violations were not substantiated. The total number of investigations completed during this 6-month reporting period represents about a five percent increase over the first half of 1983.

(See Exhibit 8)

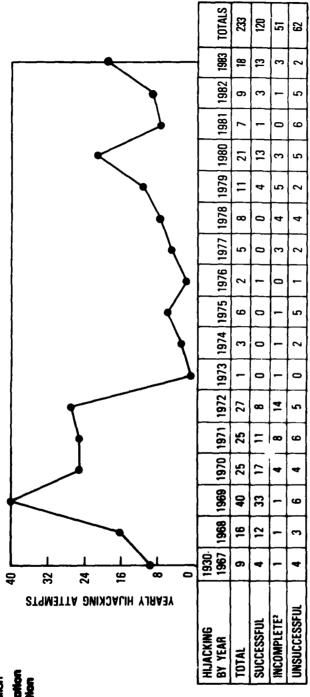

## VII. OUTLOOK

The strengthened security measures instituted by airlines and airports in 1973 have remained in continuous operation for the entire 11 years. During this period, a myriad of very effective solutions were developed and implemented to meet the extensive and varying threat of aircraft piracy and other criminal acts directed against United States civil aviation. Additionally, numerous efforts have been undertaken to resolve many of the socioeconomic and political problems which may, in part, be responsible contributing factors to the relatively high incidence of criminal acts perpetrated against civil aviation. With the emphasis placed in these areas, together with the continuing improvement in screening and surveillance equipment and the growing experience level of security personnel, it is expected that current and readily available extraordinary security measures will be sufficient to cope with foreseeable problems, threats, or attempts of violent criminal action against U.S. air commerce.

The Federal Aviation Administration believes that an effective security system is in place. With the continued cooperation of representatives of the airlines and airports as well as the flying public, FAA will continue its efforts to keep America's air transportation system safe from criminal acts.

## Hijacking Attempts on U.S. Scheduled Air Carrier Aircraft √

US Department of Transportation Federal Aviation Administration

LEffective September 1981—Includes all certificate holders as defined in Code of Federal Regulations Title 14 Part 108. Hijacking in which hijacker is apprehended/killed during hijacking or a result of "hot pursuit".
